Product-oriented software engineer experienced in working with and building microservice architectures with Ruby, Node.js, Kafka, C#/ASP.NET Core, React.js and more. I do my best work and love working on the backend, solving the unique problems there and delivering scaled customer value.

Professional Experience

Fullstack Software Engineer, *DeepL*   Feb 2024 – present
- Led C# & React MVP for sharing glossaries, collaborating with stakeholders and very closely with product. On track to deliver feature well ahead of roadmap, providing a very valuable and highly-requested feature.
- Worked closely with Senior and Principal Engineers, delivering Glossary Generator under tight deadlines.
- Enabling people, lending my specific experience cross-team when possible, pushing forward new topics for discussion, setting up team rituals and fostering a close, collaborative environment.

Software Engineer, *Prime Trust*   Jan 2022 – Aug 2023
- Reduced monthly operating costs by $120k by integrating a new ledger system with millions of transactions and by improving business logic.
- Researched and ran learning sessions for Docker & Docker Compose and Kafka.
- Set up Kafka and set up data pipelines between multiple Ruby and Typescript services.
- Dockerified the monolith and pioneered the use of Docker in all future services.
- Created brand-new TypeScript Node.js services with express.js and Nest.js, automating manual processes to be more accurate and efficient.
- Worked with Staff Engineers to set up inter-service authentication.
- Onboarded and mentored a new teammate, ran meetings, and created an optional and successful biweekly team social hour.

Software Development Engineer III, *GoDaddy*   Nov 2020 – Jan 2022
- Led the adoption of a new attachment backend in our Rails app, managing and executing the seamless migration of 20 million file attachments with no downtime or performance issues using multi-threading.
- Created a new column in a database table with 118 million+ records and backfilled the values with minimal downtime.
- Spearheaded migrating a massive monolithic Rails app from Rails 5 → 6.
- Designed and added drop-in encryption for sensitive fields in our database with full backward compatibility and no downtime.

Co-Creator & Software Engineer, *Maestro Framework*   Jul 2020 – Oct 2020
Open-source, easy-to-use framework for quickly bootstrapping serverless orchestration workflows.
- Created a framework that is over 60x faster to deploy than the fastest competitor (AWS SAM).
- Co-authored a detailed case study that explores the area of serverless orchestration, existing solutions in the problem space, and the process of creating Maestro (https://maestro-framework.github.io/ ⧉).

Languages and Technologies

Languages — Ruby ｜ TypeScript ｜ C# ｜ SQL, **Frameworks** — Rails ｜ express.js ｜ Next.js ｜ ASP.NET ｜ Roda,
Cloud — AWS Step Functions; S3; Lambda; EC2 ｜ Kafka; RabbitMQ ｜ Docker & Docker Compose, **Other** — Linux ｜ Git; GitHub ｜ Postgres; Ceph; Cassandra ｜ Protobuf; gRPC

Education

Western Governors University,   2021 – 2023
Bachelor of Science in Computer Science

Launch School, *Software Engineering* ⧉   2019 – 2020
